

Driving upkeep:

*The motor wash simply to the hot water and to the household soap by the aid of a plastic brush.

To weather him with a sweet rag , to insist on the crankshaft for it does not rust .

*To verify the screw tightening hanging the grinding: eccentric screw(key 6 skirts 0.9) and front screw of rods(to hug with moderateness)

The grinding have you finished to fix the tightening with a drop of loctite.

*To verify regularly the stuffings boxes tightening (not to hug excess hard otherwise the motor hugs and blocks)and pistons upper.

To oil with of the oil of vaseline to each utilization

To bind the lever of reverser to a servo to control the bow walk or reverse

ERELIER alike the cock radiocommandé to a servo to accelerate or to bank the navigational speed

Put in warm:

To take fire the burner by the chimney opening progressively sluices her of the gas-fired tank .

When the pressure of the boiler attains 3 or 4 bars, to open gently sluices her on the boiler as the cock radiocommandée..

To help the motor to the start in whirlpool stealing him manually (or the helix of the boat) the time that this one grows warm .

The all one has motor at first to reject of the wake can accelerate little by little .

The plug of security is foreseen to release the pressure in case of over-pressure of the boiler.

To verify the state of the superior joint regularly.

In utilization, to verify regularly the level of the wake in order to avoid an overheating dry of the boiler (who would be him luckless)

Once the performed utilization, to wait 15 minutes that the pressure of the boiler falls again in pressure before remaking full.(otherwise you risk to be to smoulder by a jet of vapour chatting the bush too early)

MRECOMMANDATION:

The utilization of a together vapour by a childish is advised below 14 years and requires the supervision of an adult(risk of burn)

The responsibility of the constructor will not be able to be questioned in case of modification of supplied stores or of a diverted utilization.
